PROJECTS

Real Time Sign Language Translator

The Real-time Sign Language Translator is an AI-powered system that converts sign language gestures into text and speech in real time, improving communication, accessibility, and inclusivity for hearing-impaired individuals.

Dress Online Booking System

The Dress Online Booking System is a Java-based application that enables users to browse dresses, book them online, and manage customer orders efficiently while reducing manual effort.

Bank EMI Calculator

The Bank EMI Calculator is a Java-based application that quickly calculates monthly loan installments based on loan amount, interest rate, and repayment period, helping users plan repayments effectively.

LED Control System

The LED Control System is an Arduino UNO-based Embedded C project that enables online control of LED operations, demonstrating real-time automation, hardware interfacing, and basic IoT applications.
